

GLOWING NATURE

GLOWING NATURE is an interactive and mysterious experience with light emitting algae. As one of the oldest microorganisms in the world they light up for an extended period of time when perfectly maintained. The site-specific installation enables visitors to magically interact with the algae that glow upon their steps, combining nature and technology to make a statement about the future of light.

GLOWING NATURE shows the beauty of nature through a unique encounter between man, biology, and technology.
