

GATES OF LIGHT

GATES OF LIGHT is the permanent installation which illuminates 60 monumental floodgates through retro reflection using the headlamps of passing cars. As you drive through, the historical architecture lights up and creates a futuristic landscape of light which uses no electricity.

Every day more than 20.000 cars pass by the GATES OF LIGHT. The buildings of 1932 have been fully renovated and augmented with a retro-reflective layer. This way of using light requires zero energy and does not contribute to light pollution.
