

SMOG FREE TOWER

SMOG FREE PROJECT is a series of urban innovations led to reduce pollution and provide an inspirational experience of a clean future. The SMOG FREE TOWER is world's first smog vacuum cleaner which produces clean air parks.

The effect of the SMOG FREE TOWER has been validated by the Eindhoven University of Technology. From the collected smog particles SMOG FREE RINGS are made which donate 1000 m³ of clean air to the city. SMOG FREE PROJECTS have been launched in China, the Netherlands and Poland.
