

WINDLICHT

WINDLICHT, the latest work of Roosegaarde, shows the beauty of green energy by connecting windmill blades with lines of light.

Special software and tracking technology detect the windmill blades rotating at 280 kilometres per hour. Roosegaarde developed the artwork together with his team of designers and engineers.

WINDLICHT creates the missing link between the Dutch and the beauty of our new landscape.

2016. Windmills, tracking software, camera's and LEDs at Eneco windfarm at Sint Annaland in Zeeland, NL. WINDLICHT is supported by KPN who became climate neutral this year. <https://www.studioroosegaarde.net/project/windlicht/>
